

Grounding Connectors

Hot Line Grounding Connector

Delta Star Connector Company's Hot Line Grounding Connector (Catalog No. AC082290) is made of a high strength, 356-T6, heat-treated aluminum alloy. The vibratory surface provides better conductivity and superior heat dissipation.

The Grounding Connector allows for maintenance or inspection without service interruption. The two (2) slotted holes in the terminal pad allow the grounding connector to be placed at the most convenient angle for line personnel.
